137 paper and woodpulp industries, and also for heating.

376 "White Coal." The total power capacity of Estonian streams is about 170,000 HP per year. In 1939 only about 40 per cent of it was being exploited.

382 Plant Development and Expansion Capability. The oil-shale industry was founded in the first year of Estonian independence, 1918. At about the same time experimentation was begun for oil refinery from oil-shale. There were no mines nor oil refineries in czarist Russia. Among the plants which developed during Estonian independence should be mentioned four leading enterprises:

382
473 First, Estonian Oil-Shale Industry, Inc. was reorganized from the State Oil-Shale Industry in 1936 by making it an incorporated enterprise
